

Business Resilience Restored: Safeguard Your Company's Future through Reliable Backup Solutions

In today's interconnected business environment, digital information has become an organisation's lifeblood. And while this digital transformation opens doors to enhanced productivity and collaboration, it also introduces a range of challenges and potential vulnerabilities.

Why Should You Care?

Worldwide there are approximately 450 000 new malware samples registered every day and 19 ransomware attacks occurring every second. Cloud Backup from Metrofile Cloud offers data protection across 20+ platforms, physical, virtual or cloud. It is a Backup and Cyber Security platform delivered from a single agent, meaning that your backups are also scanned for viruses and threats.

Security, Delivered, Business Continuity, Assured, Regulatory Compliance, Simplified

Data Security

Operational disruptions caused by data loss or system crashes can be not only costly but also damaging to your customer relationships and bottom line.

Our Cloud Backup is purposefully designed to safeguard your data, ensuring swift recovery and mitigation of risks associated with downtimes.

Ensuring Business Continuity

Downtime due to data loss or system crashes can be costly, affecting your business operations, customer relationships, and bottom line.

The Backup Solution ensures business continuity by safeguarding your data and making it available for recovery swiftly, mitigating the risk of operational disruption.

Compliance with Data Regulation

Compliance with data protection regulations is a crucial aspect for businesses, particularly those handling sensitive client and employee information.

Our all-encompassing backup solutions aid companies in maintaining regulatory compliance by guaranteeing that data is securely stored, managed, and accessible whenever required.

Responding to IT Complexity

As businesses grow and their IT environments become more complex, managing backups can become resource-intensive and potentially error-prone.

Our Cloud Backup simplifies this process with an intuitive and automatic solution, freeing up your IT team's resources to focus on other strategic tasks.

What we backup? And how?

- Full-image and file-level backup & recovery.
- On more than 20 platforms including Windows, devices, Apple devices, virtualized platforms & mobile devices.
- Protection from either an agent or host level.
- Backups are taken in either an incremental, encrypted or automated fashion.
- Backups are stored in the private Metrofile Cloud on immutable storage.

Why choose Metrofile Cloud Backup?

Watertight security: Your data is encrypted and password protected BEFORE it's transmitted from the devices housing the data, this makes Metrofile Cloud Backup an extremely secure and confidential solution.

Fully customizable: You can customize your own data backup schedule and what is backed up in it.

Compatibility: Our Cloud Backup works extremely well in tandem with our Cybersecurity solution.

Fully managed: From installation to monitoring to restoration assistance and even keeping track of hardware inventory, Metrofile Cloud will manage it all with you.

Limitless restore time: Unlimited restore point objectives (RPOs).

What the Metrofile Cloud Backup solution offers:

- File backup
- Image backup
- Application aware backups
- Network share backups
- Vulnerability assessments
- Hardware inventory
- Group management of workloads

Management

- Remote management (web-based console)
- Hardware inventory
- Centralized plans management
- Group management of workloads
- Automatic and customisable email notifications and reporting for multiple users

The Metrofile Cloud Backup solution workload includes:

- Backup
- Files/folders backup
- Full machine backup
- Disk/volume backup
- System state backup
- Application backups (SQL databases)
- Network shares backup
- Backup to cloud storage
- Backup to local storage

Included security (Optional)

- Device Control
- #cyberfit score
- Vulnerability assessment
- Active protection
- Network folder protection
- URL filtering
- Anti-virus and anti-malware without local signature-based detection
